

PORTABLE FILTRATION CART MODEL 110

Protect your pump and extend filter element life with our COMO Model 110. A bag filter on the suction side of the pump captures large particulate contamination before it can damage the pump or load the filter.

The COMO Model 110 extends fluid and machine life by removing particulate down to one micron and water contamination to as low as 20 ppm. Utilizing multi-pass filtration, our Model 110 keeps your reservoir pristine by continuously cleaning your oil. Let COMO save you money by reducing downtime and minimizing fluid disposal and replacement costs.

MODEL 110 SPECIFICATIONS:

- One C-1000 filter housing
- One CB-400 bag filter housing
- 3 or 5 GPM gear pump
- Dimensions: 46½" H x 23" W x 24" D
- Approximate shipping weight: 175 lbs

MODEL 110 STANDARD FEATURES INCLUDE:

- 115 VAC, 60 Hz, TEFC, 1725 RPM motor
- Pressure gauge to monitor element condition
- Inlet wye strainer to protect pump
- Pressure switch with High/Low shut-off for unattended operation
- Fluid transfer feature to move fluids without filtration
- Flow regulating loop to adjust flow of high viscosity oils through filter
- Power and run indicator lights
- Stainless steel element lifter

THE MODEL 110 FILTERS THE FOLLOWING:

- Cutting oil
- Drawing oil
- Gear box oil
- Hydraulic oil
- Lubricating oil
- Transformer oil
- Tool coolant
- Quenching fluid
- Ester-based fluid
- Water-glycol fluid
- Vacuum pump oil
- Plus other industrial fluids
